TES_Ext

Dear Diane,

Attached is the data file that I received from Covance. I have included labels with the variables along with the units. The variable 'ETS' refers to nonsmokers and their exposure to ETS. Of importance are the nonsmokers responses and for our purposes I have only included the data for the nonsmokers. I see that there are missing data for some of the nonsmokers, however. I will try to determine why these are missing.

Please let me know whether this format is what you need in order to facilitate the modeling. If it is not, please let me know how it needs to be reshaped in order to provide you with what you need in a timely manner so that we can get the simulation results back as soon as possible to feed into the study plan, if possible.

Best regards,

Bettie

Dear Bettie

I noticed that there are some NONSMOKERS who are listed as EXPOSED (I assume that this means that they were randomized to ETS?) but there is no corresponding NUMCIGS and HOWFAR data. are these data items available?

thanks
Diane
